

Capsule Summary
BA-2740
Burns House
18404 Graystone Road
Baltimore County
ca. 1842
Private

The Burns family erected the stone dwelling at 18404 Graystone Road circa 1842. The Burns family retained ownership of the tract for over 130 years, when it was sold in 1972. After a period of severe disrepair, the property was sold in 1998 to the Spencers, who restored it. The Burns House is one of three Burns' family houses on Graystone Road, between the 19th century towns of Wiseburg and White Hall, near the Pennsylvania line. It is constructed of stone, retains its vernacular form and stands as an example of a rural agricultural farmhouse.

The three-bay wide vernacular dwelling is three-and-a-half stories in height. As originally constructed, the randomly coursed fieldstone building's fenestration included two entry doors, which would have flanked the now added central entry. A central second story balcony also existed over the entry, although this opening has been replaced with a window. Brick jack arches have also replaced existing stone lintels throughout the building. Additionally, all of the openings hold modern 6/6 windows with molded wood surrounds and square-edged wood sills. However, the original façade, facing south, has been reoriented to the north elevation. A three-story wing with full-width porches, part of which was built on the foundation of an original springhouse, has been added to the east side. A one-story addition has also been added on the east end. The gabled roof and newly added dormers have been clad in standing seam metal. The roof is accented with a new-boxed wooden cornice. Three interior end brick chimneys exist with corbeled caps. The two located in the main block have been rebuilt, while the third, located in the wing, was added. Extensively altered in the late 1990s, the building's state of deterioration had left only an exterior shell. As much of the original fabric as possible was used in the restoration. At the time of this restoration, the house was clad in scored stucco. The presence of a date stone and the stone quoins suggest that this may not have been original. There is a new garage and the foundation of a bank barn that was destroyed by fire in the mid-1990s.

☐ fair ☒ altered

Prepare both a one paragraph summary and a comprehensive description of the resource and its various elements as it exists today.

Constructed circa 1842, the three-bay wide vernacular dwelling at 18404 Graystone Road is three-and-a-half stories in height. As originally constructed, the randomly coursed fieldstone building's fenestration included two entry doors, which would have flanked the now added central entry. A central second story balcony also existed over the entry, although this opening has been replaced with a window. Brick jack arches have also replaced existing stone lintels throughout the building. Additionally, all of the openings hold modern wood 6/6 windows with molded wood surrounds and square-edged wood sills. However, the original façade, facing south, has been reoriented to the north elevation. A three-story wing with full-width porches, part of which was built on the foundation of an original springhouse, has been added to the east side. A one-story addition has also been added on the east end. The gabled roof and newly added dormers have been clad in standing seam metal. The roof is accented with a new-boxed wood cornice. Three interior end brick chimneys exist with corbeled caps. The two located in the main block have been rebuilt, while the third, located in the wing, was added. Extensively altered in the late 1990s, the building's state of deterioration had left only an exterior shell. As much of the original fabric as possible was used in the restoration. At the time of this restoration, the house was clad in scored stucco. The presence of a date stone and the stone quoins suggest that this may not have been original. The house sits on a hill above Graystone Road and is surrounded by rolling hills. There is a new garage and the foundation of a bank barn that was destroyed by fire in the mid-1990s.

EXTERIOR DESCRIPTION

The original facade, facing south, now functions as the rear elevation of this stone building. The three-and-a-half story elevation, built into the hill, now has a central entry. Ghostlines, that reach approximately five feet in height, reveal the locations of the original one-leaf doors flanking this new entry. These would have led to the basement. Two replacement 6/6 windows with wood surrounds and brick jack arches are located to the outer edges of the ghostlines. The central entry has a wood diagonally patterned inset and has a single-leaf wood door. Symmetrically fenestrated, the second and third stories each have three replacement 6/6 windows with molded surrounds, square-edged sills and brick jack arches. The central second story window replaced the original main door, which had a pedimented fifteen-foot porch by the 1990s. This would have been the original entry, as evidenced by the original interior stair configuration. However, a grander porch may have existed originally. The third story windows are located just under the eaves. Two wood gabled dormers, clad in sheet metal with standing seam metal roofs and wood 6/6 windows have been added.

The east end of the south elevation consists of a three-story six-course American bond brick wing. It was constructed in the late 1990s with full-width wooded porches on each floor, which are inset under the main roofline. The porches are supported by chamfered wood posts with lamb's tongue detailing. The second and third stories have a square post balustrade, beaded board ceilings and tongue-and-groove floors, while the first story is open with a brick floor. The wing addition is side gabled with a standing seam metal roof. The first story has an off-center single-leaf door with nine lights and two panels and two 6/6 windows with molded wood modern surrounds, square sills and jack arches. The second story follows the same fenestration pattern, but the door has a three-light transom. Similarly patterned, the third story of the porch has a solid paneled door with no lights. There is a one-story side-gabled, which is set back. The addition, constructed on parts of an original

Continuation Sheet

Number 7 Page 1

springhouse, has a six-course American bond brick façade. There is a 6/6 window with a molded wood modern surround, square sills and jack arch.

The east elevation is composed of the brick wing and a one-story off-center wing. The east foundation of the main addition and the east elevation of the one-story wing are constructed of stone reused after the dismantling of an original springhouse. Brick quoins tie the stone portions to the adjacent elevations. An off-center interior chimney, which is not aligned with the ridgeline of the roof, is a dominant feature of the east elevation. The porch side of the gabled end is clad in beaded weatherboard. The first and second stories each have two 6/6 modern wood windows with molded surrounds, square-edged sills and brick jack arches. The addition has a similar window with a splayed stretcher brick lintel, meant to mimic the larger jack arches. The addition has a molded wood cornice. Originally, there was a date stone inscribed with 1854 located on this elevation of the main block.

The rear elevation, facing north, now functions as the dwelling's primary façade. The elevation consists of the main block, wing and wing addition. As the house was constructed into the hill, the main block is only two-and-a-half stories in height and the wing is two stories. The main block has a slightly off-center entry to the west, with a jack arch, wood surround, and a single leaf wood door with diagonally patterned panels. It is flanked by two 6/6 modern windows with molded surrounds, square-edged wood sills and brick jack arches. The second story has a slightly off-center to the east window and two 6/6 modern windows with molded surrounds, square-edged wood sills and brick jack arches that line up with those on the first story. The windows are located just under the eaves. There are two wood gabled dormers, clad in sheet metal with standing seam metal roofs and 6/6 windows that have been added.

The two-story wing, located to the east is slightly set back from the main block and has a standing seam metal shed roofed porch that aligns with the one-story addition's side gable, forming a continuous roof. Four square wood posts with chamfered edges and lamb's tongue details support the slate decked porch. There is an off center entry with a single-leaf wood twelve-light and single panel wood door. It has a three-light transom, molded wood surround. The elevation is also pierced on the first story by two 6/6 modern windows with molded surrounds, square-edged wood sills and brick jack arches. The second story consists of two wood gabled wall dormers with 6/6 windows and sheet metal roof cladding. The enclosed porch extension addition has a six-course American bond brick wall. It has a centrally located single-leaf wood eight-light and two paneled door with a shed overhang that extends from the main roof. Wood triangular brackets support the overhang.

The west end of the building, built into the hill, retains its original symmetrical configuration, but the windows have all been replaced with molded surrounds, square-edged wood sills and brick jack arches. There is a ground level 6/6 window located on the southern end. There are two similar 6/6 windows on the first and

Continuation Sheet

Number 7 Page 2

second stories. The half story is pierced with two four-light casement windows with wood surrounds and no jack arches.

INTERIOR DESCRIPTION

The house was merely a shell at the time of the restoration in the late-1990s. Therefore, little of the original interior material remains intact, although the appearance mimics historic interior detailing. The main block retains its original center hall configuration, but the direction of the stair has been altered in order to orient with the change of the primary façade from south to north. The modern stair is a straight-flight open wall stringer with a chamfered square newel post. Off the center hall, the configuration of the rooms has been altered. It appears that the original plan was a center passage with a hall and parlor based on the stair and fireplace locations. However no evidence remains to suggest whether it was a single or double pile configuration.

Throughout the main block, modern wing and addition, the wood baseboards are six-and-a-half inches high with a beaded cap. The windows are inset with eighteen-inch sills, beveled paneled casings and four-inch wide molded square surrounds. The floorboards are of varying width throughout, but the renovated attic story contains the original floors from the attic which are constructed of red oak boards four to eight inches in width. The original chestnut floorboards from the basement were used to create the kitchen cabinets. The kitchen is located in the first floor of the wing and retains the original block, exterior stone wall on the interior. The doorway to the main block from the kitchen, located in this original exterior wall, is twenty-six inches thick. The beveled window insets in the kitchen are detailed with diagonal boards rather than the paneled casings used in the rest of the first floor. There are paneled doors constructed with beaded board throughout the dwelling.

Half of the attic story has been converted to living space. The remaining area, also lit by the dormer additions, retains some of its original fabric. The floors are now the original sub-floors, there are machine cut nails, a false plate, mortise-and-tenon joints, and a mixture of square sash-sawn and half-round, hand-hewn rafters with scribe marks. These construction details support a circa 1842 date.

The basement, partially refinished, also reveals some original material. There are square-notched hand-hewn beams, machine cut nails, a hand-hewn summer beam, and parged stone walls. The finished portion retains a fireplace in its original location, but it has been completely rebuilt.

OUTBUILDINGS

There is a non-historic garage to the north of the main block. Constructed in the late 1990s, the one-story, three-bay garage has two double-leaf wood doors with diagonal v-patterned boards and single-leaf eight-light paneled door and jack arches. The garage has a side-gabled standing seam metal roof with wide beaded board eaves. It is constructed of six-course American bond brick with a concrete block interior. The garage is built into the hill and has a vented cupola.

The property also retains the stone foundation remains of the original bank barn. The barn was destroyed by fire in the mid-1990s.

The Burns family erected the stone dwelling at 18404 Graystone Road circa 1842. The property is located about a mile from York Road, the major thoroughfare connecting Baltimore to York, Pennsylvania. The Burns family retained ownership of the tract for over 130 years, when it was sold in 1972. After a period of severe disrepair, the property was sold in 1998 to the Spencers, who restored it. The Burns House is one of three Burns' family houses on Graystone Road, between the 19th century towns of Wiseburg and White Hall, near the Pennsylvania line. It is constructed of stone, retains its vernacular form and stands as an example of a rural agricultural farmhouse.

HISTORY

Although the exact date of construction for the dwelling has not been determined, historic maps, deeds, and stylistic embellishments support a circa 1842 date.¹ Constructed of stone, the central hall plan Burns House was designed in the vernacular form popular in rural farm dwellings throughout Baltimore County. The Burns House stands high on a hill overlooking pastures and the nearby Second Mine Branch of the Gunpowder Falls. The house is surrounded by sloping farmland edged with mature trees and agricultural fields. The 1998 restoration revealed an 1854 date stone in the stucco. It has since been removed, but may have indicated the date the house was clad in scored stucco rather than when it was first constructed, as presently believed.² Decorative stone quoins further suggest that the house was probably not originally clad in stucco. Research indicates that John W. Burns owned the property in 1850 as depicted on the 1850 *Map of the City and County of Baltimore Maryland* by J.C. Sidney. In addition to the archival and physical evidence, it is reported that the house may have been constructed partially from stone that was used in another house that originally sat down the hill from where the Burns house was constructed. The house was demolished prior to 1838 when the Susquehanna Railroad, which extended from Baltimore to the Pennsylvania line, came through the area and the road was moved.

During the 20th century, the property, including the main dwelling and agricultural outbuildings, was bequeathed numerous times to members of the Burns family, until 1972 when the family relinquished the

¹ The building is denoted on Hopkins' 1877 Atlas of Baltimore County.

property and the title was transferred to John and Joann Keil. The Keil family owned the property until 1997. In 1998 the Spencer's purchased the dilapidated house on 2.28 acres and began an extensive restoration. Some of which was conjectural due to a significant loss of the original historic material.

The property on which the Burns House is situated is on the west side of Graystone Road, approximately a mile to the east of York Road in Election District Seven, one of the largest and most populated regions of the county in the latter part of the 19th century. Pennsylvania bounds the district to the north. The area historically consisted of rugged hills and valleys, traversed by major transportation corridors, such as the railroad and well maintained country roads³. Arable fields, located in the valleys, for plantings of wheat, corn, oats and fruits support the districts. It was known for its dairy production and the breeding of cattle. In addition the waterpower of the Gunpowder Falls and its tributaries supported numerous mills, including the largest paper mills in the state.

The property is located just east of the town of Parkton. Little is known about this small village. Parkton is a 19th-century town that is less than thirty miles north of Baltimore City. Situated just west of York Road and the Northern Central Railroad, Parkton was home to 50 inhabitants in 1881 and at that time, was the center of a rich agricultural and trading region. The close proximity of Parkton to York Road and the railroad rendered the area as a center of trade. The cultivation of wheat, corn, oats, fruit, dairy, and the breeding of cattle supported the residents and neighboring towns of White Hall and Wiseburg, set to the south and northwest respectively. Both major stops for the Northern Central Railway, the communities are located less than twenty-five miles north of Baltimore City. In 1881, the village of White Hall was home to approximately 100 people. Located in a prominent dairy farming region, it was one of the principal milk stations along the railway, shipping over 300 gallons of milk daily to Baltimore. On Gunpowder Falls, just above White Hall, was a Manila paper mill owned and operated by A. J. Burke. John Wise, an emigrant from Germany who came to this county about the time of the American Revolution, established the village of Wiseburg. The community thrived on the production of wrapping paper, which was manufactured at William Wise's paper mill. The Northern Central Railway bisected the two villages, both of which were surrounded by rural agricultural farms devoted primarily to dairy production.

Prior to the organization of turnpikes in Baltimore County, many of the county's roads were considered unfit for use. Earlier efforts to incorporate turnpike companies originated from the county government, yet, by the turn of the 19th century, efforts to create better roads emanated from the state government's efforts to better serve the growing rural population. This action resulted in the laying of a road from Baltimore, Maryland to York,

Pennsylvania that would replace the winding, indirect Old York Road.⁴ The privately organized York Turnpike Company was incorporated in 1805. Work on the new road ceased in 1810, when the thirty-five miles of road from Baltimore to the Pennsylvania Line was completed. This route soon became one of the primary north/south corridors in Baltimore County. Taverns in Maryland Line, Wiseburg, Philopolis, and Timonium served travelers along the route.⁵ In 1838, the Baltimore and Susquehanna Railroad Company began construction of a line that would run northward from Baltimore nearly parallel to the York Turnpike.
